

HIGH SPEED INSERTION RIGID DESICCANTS

DRICARD™ is a unique flat moisture absorber comprised of calcium chloride desiccant laminated between film layers. Like desiccant packets, DRICARD is designed to maintain a dry package environment to keep nutraceuticals, foods and diagnostics safe from the damaging effects of moisture. The desiccant's flat profile is designed for use in applications that require desiccation in small and narrow packaging spaces or where it is essential to minimize confusion with the end-product.

- **Flat profile ideal for several applications:**

- **Powder products:** The flat profile of DRICARD prevents powder from clumping. The DRICARD's flatness minimizes interference when the product is scooped by the consumer.
 - **Confectionary and Food:** DRICARD is ideal for powdered sports nutrition and drinks, as well as other food or applications. DRICARD can maintain confectionary, cookies, spices and organic food packages at proper humidity levels by absorbing excess moisture and preventing condensation from damaging to foods.
 - **Pouches:** The flat DRICARD controls headspace moisture while saving space, as required in some nutraceutical, pharmaceutical and diagnostic strip packaging barrier pouches.
- **Differentiated:** The bright orange color and clear markings of DRICARD help consumers differentiate the DRICARD from the packaged product.
 - **Non-dusting:** The calcium chloride desiccant is bound within the laminate structure and prevents dusting.

- **Automatable:** The rigid structure of the card allows high speed automatic insertion by card dispensers or pick-and-place systems.

DRICARD is US FDA compliant for use in nutraceutical and food applications (see compliant certificate for details). It is available in a variety of standard sizes, and the size can be customized.

Standard sizes:

- 25x50 MM
- 40x40 MM
- 50x50 MM
- 60x60 MM
- 85x85 MM
